Dear Clients,

Hospitals, major companies and government offices have been hit by a massive wave of cyber attacks across the globe that seize control of computers until the victims pay a ransom. The attack, which has now been dubbed as the largest “cyber security incident” in the world, has affected more than 200 000 organisations, including the NHS, Telefónica, as well as the Russian Interior Ministry.

As we move into a more digitalized world, Enterprise Outsourcing ([www.enterpriseoutsourcing.com](http://www.enterpriseoutsourcing.com)) and Secured Enterprise ([www.securedenterprise.co.za](http://www.securedenterprise.co.za)) have seen a rise in cyber security threats and ransomware attacks.

We would like to assure our clients and friends that to date Enterprise Outsourcing and Secured Enterprise’s clients have not been affected by the ransomware attack and that we are vigilant with regards to securing our network security. Secured Enterprise and Enterprise Outsourcing have ensured that measures have been put in place in order to secure our clients infrastructure and data.

Unfortunately, no company can be 100 % risk free from cyber threats and we would urge companies to bring the following to all desktop users attention:

- Install the latest Microsoft update
- Do not open unknown emails, especially if they contain links or attachments
- Back up important data. Once data is backed up it can easily be restored.

We would like to assure our clients that we are taking all preventative measures to protect our systems and those of our many clients. Our teams of highly skilled experts are here to help you with any queries you may have.
